A Study on Ratio Analysis at Accord Puducherry

Department of Management Studies, Rajiv Gandhi College of Engineering and Technology, Puducherry, India

ABSTRACT
The main aim of the study is to investigate the ratio analysis of ACCORD, Puducherry. The financial decision plays a vital role in improving the growth of any organization. The main goal of the accounting department in the firm is to measuring the performance of the organization to its profitability and also measuring the relationship between the net incomes to equity. The data in the present study is fully based on secondary data and it is collected from the past and present performance of ACCORD Puducherry providing financial assistant to entrepreneur. In order to analyze the financial performance of the organization, the ratio analysis, and trend analysis is used. The result clearly shows that there is high degree of current ratio between the net income and equity, and satisfactory level of trend analysis is high in the present year.

KEYWORDS: Financial Statement, Ratio Analysis, Trend analysis, Profitability

1. INTRODUCTION
The financial statement disclosing status of investments is known as balance sheet and the statement showing the result is known as profit and loss account (Hampton JJ 2003)

Financial analysis is structural and logical way to present overall financial performance of a financial institution. It’s also help to evaluate and decision making for business operation. In financial analysis process ratio analysis is the most dominant and logical structure to help business related stakeholder. Under the financial ratio analysis process there are few categories to identical area of financial institution.

Financial Analysis is the process of identifying the financial strength and weaknesses of the firm by properly establishing relationship between items of financial statements. A financial statement is an organized collection of data according to logical and conceptual framework consistent accounting procedure. Its purpose is to convey an understanding of some financial aspects of a business firm. It may show a position at a moment of time as time, as in the case of an income statement.

AREA OF FINANCIAL STATEMENT ANALYSIS:

- Working capital analysis
- Financial structure analysis
- Activity analysis
- Profitability analysis

OBJECTIVES OF FINANCIAL PERFORMANCE:

1. Assessment of Past Performance:
Past performance is a good indicator of future performance. Investors or creditors are interested in the trend of past sales, cost of goods sold, operating expenses, net income, cash flows and return on investment. These trends offer a means for judging management’s past performance and are possible indicators of future performance.

2. Assessment of current position:
Financial statement analysis shows the current position of the firm in terms of the types of assets owned by a business firm and the different liabilities due against the enterprise.

3. Prediction of profitability and growth prospects:
Financial statement analysis helps in assessing and predicting the earning prospects and growth rates in earning which are used by investors while comparing investment alternatives and other users in judging earning potential of business enterprise.

4. Prediction of bankruptcy and failure:
Financial statement analysis is an important tool in assessing and predicting bankruptcy and probability of business failure.

5. Assessment of the operational efficiency:
Financial statement analysis helps to assess the operational efficiency of the management of a company. The actual performance of the firm which are revealed in the financial statements can be compared with some standards set earlier and the deviation of any between standards and actual performance can be used as the indicator of efficiency of the management.
Factors Determining Financial Structure:
- Trading on Equity or leverage
- Capital Gearing
- Cost of Capital
- Maximum Control
- Flexibility
- Size of the Company

Parties interested in financial analysis
The users of financial analysis can be divided into two broad groups.

Internal users

- Creditor
- Workers
- Customers
- Government
- Public
- Researchers

2. REVIEW OF LITERATURE
Financial Statement simply means a declaration of what is believed to be true and which, communicated in terms of monetary unit. It describes certain attributes of a company that is considered to fairly represent its financial activities. (Meigns et al. (2001).

Liquidity ratios measure a firm’s ability to satisfy its short-term obligations as they come due. Debt ratios measure the extent to which a firm uses money from creditors rather than stockholders to finance its operations. Profitability ratios are among the most closely watched and widely quoted financial ratios.

Financial ratios into five categories “liquidity ratios, solvency ratios, activity ratios, profitability ratios, and operating ratios”. They indicated that financial ratios themselves do not provide valuable information about a firm’s performance. (Andrew and Schmidgall 1993)

The temporal behaviour of financial ratio distributions and found that business cycle affects the cross sectional financial ratio distributions. (Virtanen and Yli-Olli 1989)
