## ABSTRACT

This article describes the importance and role of building women's support centers in Samarkand region. This center includes health care, counselling, support groups, education and employment support. Women's centers also serve to strengthen the feelings of solidarity and nationalism among women. Also, these centers help women to take their place in society. The importance of building women's support centers in Samarkand region was described in detail in the article for the first time.

**KEYWORDS:** Women's center, culture, architecture, design, comfort, interior, Samarkand, historical, Spain

## Introduction

A women's center is a community-based organization that is focused on providing support, resources, and advocacy for women. These facilities typically offer a variety of services such as counseling, crisis intervention, education, and referral services. Some women's centers also have programs and activities focused on personal growth, career development, and physical fitness. Many women's centers also specialize in assisting vulnerable populations such as victims of domestic violence, sexual assault survivors, and low-income women. The primary goal of women's centers is to empower women and promote gender equality. Through their programs and services, women's centers aim to help women achieve economic independence, improve their health and well-being, and strengthen their social connections. Women's centers are often staffed by volunteers and paid professionals who are passionate about women's issues and have specialized training in fields such as sociology, psychology, and social work. These individuals work to create a safe and welcoming environment where women can come together and support each other as they navigate their individual journeys.

## Research Methodology

In the article, research methods such as on-site study of the architecture of women's support centers in Samarkand region, monitoring of its current state, classification and systematization, natural research, photofixation, analysis and scientific generalization of collected materials, drawing conclusions are presented. Lanned

**Analysis and results.** The Hiralikta Women's Center was first established by Manobu Murakami in 1934. This center was one of the first organizations in Japan to serve women. At the Women's Center, women have the opportunity to receive information about new social rights, family and health issues, education and work, illness and hygiene, work issues and many other training courses. The center also assisted in the production of writing instruments, outdoor oils, and disease prevention. Gradually, the center was created in many countries and acquired great importance. Today, women's centers continue to serve women with comfort, opportunity, and value. The project aims to provide basic vocational training in various fields and create a hostel for women. The project aims to provide women with long-term skills and assets that will help them in their socio-economic growth and development. The center helps to involve women in activities that support and encourage their economic well-being. The Women's Center building began as a solid building. Anyone can access the flat roof of the building and the open-air theater, which gives the building a public character. Its functional program includes two auditoriums (indoor and outdoor), a library, a production kitchen, eight auditoriums for various purposes, medical and legal departments and other key premises. Most of these interior spaces are arranged around a central space, thus creating a point from which people can access all parts of the building and a place where they meet between classes or at

the end of the day. According to the materials, the building combines brick and concrete. Knowing how important it is to provide light and ventilation in a controlled way in this part of the planet, and not open large openings, the facade is often made of coboe.

### Conclusion/Recommendations

In conclusion, it should be noted that the women's center is a center created to meet the needs of women. These centers usually meet the physical, emotional, spiritual and social needs of women. The construction of a women's center in

Samarkand could include services for women such as health care, counselling, support groups, education and employment assistance. Women's centers can also serve to strengthen the sense of solidarity and solidarity among women. In addition, these centers can help women take their place in society.
