

Scientific Perspective Behind the Folk Literature and Culture

Alish Kumar Karna

Ex-Student of Utkal University, Bhubaneswar, Odisha, India

ABSTRACT

Folk literature, also called oral tradition. It's traditional knowledge and beliefs of cultures having no written language. This is transmitted by word of mouth and consists, as does written literature, of both prose and verse narratives, poems and songs, myths, dramas, rituals, proverbs, riddles, and the like. Nearly all known peoples, now or in the past, have produced it. In folk literature and culture many people believe it's all about superstition belief; but they are Wrong, because All superstitions have scientific reasons behind them. They contain biological, chemical, physical, solar and unproven logical reasons etc. From a vast field like literature, the scientific perspective inherent in people's literature and culture has been taken up for research. There is a relationship between interpretation and perspective. Therefore the scope and approach of folk culture will be discussed, Folk beliefs in traditional folk culture will be discussed, The influence and reputation of science will be discussed, the need for compliance with various folk beliefs will be discussed. Finally I Will go the compare of folk beliefs in the modern world culture and the regional folk culture.

KEYWORDS: *Eclipse, Yogoja, unproven logical implications, Interstellar traveling etc.*

INTRODUCTION

Literature generally refers to every readable section of the universe. Just as a human being has arms, legs, head, ears, eyes, etc. Generally literature explains the composite form of science, history and culture, geography, politics, economy etc. The pre-emergence or primary development of any literature is usually born from folk literature and culture. Popular literature is born from folk literature and culture. Our Indian folk literature and culture is generally socialist. The various customs, traditions and culture prevalent in the social human society are considered superstitions by modern people. But people do not know what kind of bright scientific perspective is hidden behind the superstitions that have been flowing since ancient times; Therefore, it is necessary to bring them to the public opinion, showing the reasons for them.

JUSTIFICATION AND SCOPE OF STUDY

History and modern science are the joint makers of ancient and modern times. Therefore, today's man is more interested in learning about the modern scientific perspective embedded in ancient folk literature and culture. Knowing the various scientific perspectives behind superstitions will lead to the

welfare, development and development of human society. prevalent in our society. Human social, economic, political, etc. can be developed by knowing the scientific point of view hidden behind various superstitions. Ancient people generally believed in God and worshiped demons, so based on that, various kinds of fantastic stories were compiled and spread to the people, the real reason of which people can know. Jagajanya, bell conch in folk culture. The pollution in the society can be controlled by chanting and chanting. Our overall development can be achieved by knowing the science behind the popular culture prevailing in our society.

Today's generation is trying to immerse itself in the creation of fire that is created by the fusion of traditional folk culture and tradition with the modern scientific perspective. This theme is designed to meet that need. Generally I understand that the scope of literature includes science, history, economics, politics, social science, technology etc. From my childhood, I read science, history and literature with great interest and tried to understand. As a result, I have designed this topic today. Any ancient history or culture such as the Harappan civilization,

Mahenjodaro civilization was very interested in learning about the Mesopotamian civilization, the Chinese civilization, etc; So I like this topic. Seth needs to pay attention to how we can correct the various types of superstitions prevalent in our society by telling the real reasons. For example, they refuse to wash their nails, hair and hair during the evening and night. In ancient times, there was no proper lighting system to do this, that's why people thought it was bad to do so. But now, even with the proper lighting system, people are doing the work badly. It is not reasonable to do so now. Since my childhood, I have been watching movies where modernity and scientific approach are applied along with ancient concepts. Look at that person Iron man, Thor, Captain America, The incredible Hulk, The Avengers, Spider man, Black Panther, Black Adam, Batman, Superman, Aquaman, Wonder woman, Green Lathan, Krish, Chennai to china etc. If people know its true facts and believe it and follow it properly, the overall development of our human society can be achieved.

INFLUENCE AND ESTABLISHMENT OF SCIENCE IN FOLK LITERATURE AND CULTURE.

1. Biological effects:

This is why you are made to eat dahi-cheeni before starting anything important?

Dahi or curd is a wonder drug for the body. A superfood which aids digestion and acts as a natural laxative, curd also contains many vital nutrients in it like calcium, vitamin B-2, vitamin B-12, potassium, and magnesium. It is also easier on the stomach so for those who do not like having milk, curd can come to your rescue. It is easier to digest that way.

2. Physical effects:

Why is there no head in north?

Magnetic fields on the Earth are concentrated in the North and the South Pole. When you sleep with your head pointing north, your body's magnetic field interferes with that of earth. This can fluctuate your blood pressure and can even cause heart problems. Your heart needs to work harder to overcome this.

3. Chemical effects:

Is water of holy Ganga pure?

Is thus believed to have a purifying effect and is one of the reason behind faith on this river as Goddess, who can wash every person sin. The scientific reason is that water of river Ganga is naturally having bacteriophages, which do not allow bacterial growth. It is noteworthy that the Ganga water contains Oxygen levels 25 times higher than any other river in the world. This is one of the reasons of self-purifying

attributes of River Ganga and high levels of oxygen in the waters of Ganga gives it the unique ability to remain fresh over a prolonged period of time.

4. Solar effects:

Is an eclipse harmful during pregnancy?

Many cultures, including in India, a solar or lunar eclipse is considered a bad omen and harmful for a pregnant woman. The eclipse is believed to affect the developing baby by causing a physical deformity, cleft lip or birthmarks.

The harmful effects of an eclipse are believed to affect expecting women who are in the direct rays of the sun or moon while the eclipse is happening. That's why the most common recommendation is simply to stay indoors for the duration of the eclipse. This is also why you certainly don't need to worry about a solar or lunar eclipse happening somewhere else in the world.

5. Unproven logical implications:

Is god existence in the universe?

Arguments against the existence of God.

Evil: Because evil exists, God cannot be all-powerful.
Pain: Because God allows pain, disease and natural disasters to exist, he cannot be all-powerful and also loving and good in the human sense of these words, Injustice, Multiplicity etc.

Is there a scientific theory of the existence of God?

In pantheism God and the universe are considered to be the same thing. In this view, the natural sciences are essentially studying the nature of God. This definition of God creates the philosophical problem that a universe with God and one without God are the same, other than the words used to describe it, Interstellar traveling theory, Yogoja etc.

COMPARE OF FOLK BELIEFS IN THE MODERN WORLD CULTURE AND THE REGIONAL FOLK CULTURE

Folk literature are the important topic of any literature. Now this topic is too bigger and wide. If we compare and different between modern world culture and the regional folk literature automatically find out the significance, important of folk literature. Folk customs tend to have anonymous sources, from unknown dates, through multiple hearths, whereas pop culture generally has a known originator, normally from MDC's, and results from more leisure time and more capital. EX: Folk music tells stories or conveys information about daily activities.

CONCLUSION

Folk literature and culture gives us the wisdom to understand these moments from different points of

view. It showcases that all of our problems and successes happen in every culture and throughout different periods of history. We are unique as individuals, but we are all connected through these moral truths. If We are able to find out the scientific perspective behind the folk literature and culture then our overall development like social, economical, physical etc. development are growing. Thus we should understand the our superstition believe in scientifically then we obey.
